

Advanced Regional Workshop

General objectives:

The most complex and less frequent approaches to regional anesthesia will be considered.

Specific objectives:

The participant will acquire the theoretical concepts of the proposed approaches and their applications. The participant will also be able to perform practices on live models in the suprascapular, cervical plexus, infraclavicular, saphenous, femoral cutaneous, sciatics, paravertebral, neuroaxial and other approaches that will allow to acquire skills for future practice.
