

Obstetrics Workshop in Portuguese

General objectives:

The workshop is oriented to learning the updated algorithms of cardiopulmonary resuscitation in the pregnant patient and to promote the strategy in the use of a cardiorespiratory arrest code (blue code). It is also aimed at recognizing the use of simulation as a teamwork tool and conducting diagnostic learning and treatment of massive obstetric hemorrhage, hypertensive states in pregnancy and the role of the anesthesiologist in this situation. It will also be focused to promote the learning of the risk factors of thromboembolic disease and reinforce the training in the management of the resource of technical and non-technical skills in these situations.

Specific objectives:

Once the workshop ends, the participant will acquire teamwork skills, will have the necessary attitudes to carry out the role in the same. He will also be able to differentiate cardiopulmonary resuscitation in an obstetric patient with respect to the general population, will acquire skills in the use of different strategies before a hypertensive state of pregnancy and also the knowledge before risk and the management of thromboembolic events in the obstetric patient.
