

POCUS WORKSHOP

General objectives:

These are aimed to the demonstration of the use of ultrasonography as a diagnostic and therapeutic tool in different perioperative situations, such as the evaluation of the fasting state, the airway, and some elements in the cardiovascular and pleuropulmonary sphere.

Specific objectives:

Once the workshop ends, the participant will be able to perform a basic evaluation of the airway, of the pleuropulmonary sector, basic cardiovascular evaluation (blood volume and contractility state) with ultrasound, as well as identify the gastric antrum and body and acquire the ability to assess gastric volume when the contents are liquid.
